Introduction.....	4
Number grid.....	5

2 times table

Ups and downs.....	6
Groups of two.....	7
Cross the line.....	8
Hop and jump.....	9
Find your number.....	10
Around in a circle.....	11
Score and collect.....	12
Toss them in.....	13
Record the sum.....	14
Count them up.....	15

5 times table

Mind the gap.....	16
Into the bucket.....	17
Along the line.....	18
Bounce with me.....	19
Take a step forward.....	20
Shake it up.....	21
How many minutes?.....	22
We go together.....	23
Inner circles.....	24
Pile it on.....	25

10 times table

Towering heights.....	26
Jump and turn.....	27
What's the catch?.....	28
Count up and count down.....	29
Meet in the middle.....	30
Magic rings.....	31
Throw it aside.....	32
Catch this!.....	33
Roll in order.....	34
Going round in circles.....	35

2, 5 and 10 times tables

Build it up.....	36
Knock them down.....	37
Change the shape.....	38
Pass it on.....	39

We all stand together.....	40
In the ring.....	41
Break it down.....	42
Gone shopping.....	43
Stand over there.....	44
Keeping time.....	45

Learning in sequence

Toss it over.....	46
Make a list.....	47
Turn and turn again.....	48
Count and catch.....	49
Into the middle.....	50
How far can you go?.....	51
Take your partners.....	52
Every increasing circles.....	53
Stand in line.....	54
A few more to go.....	55

Guessing the table

A model experience.....	56
How many in the group?.....	57
Pick me up.....	58
Find your partners.....	59
Show me your answers.....	60
One, two, three.....	61
Look underneath.....	62
Just choose one.....	63
Make a record.....	64
Follow the trail.....	65

Finding factors

Swap with me.....	66
Factor that in.....	67
Either way.....	68
It works both ways.....	69
Put them together.....	70
Two bounces.....	71
Throw them to us.....	72
Walking two by two.....	73
Find a partner.....	74
Set it out.....	75

Introduction

As it is now a requirement that all children leaving primary school must have a sound grasp of the 2–12 times tables, teachers and others who work with them must look for stimulating and imaginative ways to teach these tables and try to make the learning process both effective and fun.

The first chapters in the book contain activities specifically for use with the 2, 5 and 10 times tables, first on their own, and then together.

The remainder of the games are appropriate for any of the times tables, from 2–12, and may be used to practise whichever tables are being learned by the children in the class or group at the time of playing.

Some of the games offer opportunities for children to learn the questions and answers for each table in sequence. Other games test their memories and thinking skills as they try to identify the table they are working on. There are also games to teach children the different factors that can make up each answer.

When games require children to take on different roles, you should choose the parts carefully to suit their individual abilities and confidence levels, ensuring that appropriate challenges are offered to each. The degree of stimulation and challenge may be increased gradually to suit each class or group, by moving from simpler tables to harder ones, swapping from sequences to random orders or working at a faster pace.

Children learn best when they are presented with information repeatedly and in a variety of ways. The games in this book help to teach times tables through a mixture of visual, aural

and kinaesthetic activities: looking and sorting number cards, saying the numbers aloud and moving around to find the correct places and partners.

To prepare for the games, you will need to make sets of cards, each large and clear enough to be seen from a distance. These may be as simple as sheets of paper or, to make them last longer, squares of plain card/laminated sheets. The numerals can be written with a black marker pen, and must be large enough to be instantly recognisable and easy to distinguish from one another from a short distance away. Children may make the number cards for themselves, but you should check to ensure that the numerals are correctly formed, of an equal size and large enough.

To be able to play any or all of the games, it is necessary to create two sets of cards numbered 1–12 and thirteen sets of cards numbered 0–9 that will be reusable on several occasions. If making sets of cards for single use only, the numerals needed for each game are listed under Preparation. Some activities will also require 'x' and '=' cards.

The games will be most successfully played in a hall or other large clear space, or outside on a playground or grassy area. However, they may be adapted to fit within any available room or outdoor space, depending upon the number of players. Most of the games will ideally be played with a class of 20–30 pupils, but, for some games, a smaller number can encourage more active participation, while other games are more fun when played with a larger group.
